FLORA 

Two cubes which fit into each other and create an architectural effect display nature as if on a stage. The close distance between the inner and outer container achieves a perfectly harmonious silhouette. Three different sizes – height and width, but with the same depth – make possible versatile combinations which structure or accentuate a space. Our well-known planting inserts allow both indoor and outdoor use of the containers.

Planting inserts

Removable planter inserts made of high-quality aluminium are a standard fitting for every FLORA plant container, only the intended use determines whether a water-permeable or a water-proof insert is the right choice, the double-wall design, which creates a layer of air between the plant container and the planter insert, ensures that the root system is protected against heat and frost

FLORA

Using plants outdoors

Ventilation slits for oxygen in the root systems, water reservoir, insulating air layer for protection against heat, drying out or frost

Using plants indoors

Watertight, light aluminium, optionally with water reservoir and water level indicator
