

Paro

Michael Koenig 2013

FLORA 

Paro's concealed rollers make it extremely mobile, so it is ideal for use wherever flexibility is needed. With just a few movements, terraces or courtyards can be redesigned and converted into different kinds of spaces. The high construction provides both protection against prying eyes and a climbing aid for plants. Thanks to its asymmetrical shape, two planters or more can be combined in functional and varying ways.

Planting inserts

Removable planter inserts made of high-quality aluminium are a standard fitting for every FLORA plant container, only the intended use determines whether a water-permeable or a water-proof insert is the right choice, the double-wall design, which creates a layer of air between the plant container and the planter insert, ensures that the root system is protected against heat and frost

FLORA

Using plants outdoors

Ventilation slits for oxygen in the root systems, water reservoir, insulating air layer for protection against heat, drying out or frost

Using plants indoors

Watertight, light aluminium, optionally with water reservoir and water level indicator
