

## Separo

Michael Koenig 2013

**FLORA** 

Separo is an elegant outdoor screening system which makes use of straight lines. Five different aluminium elements overlap each other and are mounted on a steel beam which is anchored firmly to the ground. The pattern in the individual elements creates a delightful interplay of light and shade, and the whole construction is light and transparent. The different heights and widths of the elements result in a varied silhouette which both catches the eye and ensures privacy. The free standing version of Separo, with two aluminium elements of different sizes, can be arranged very flexibly. Various patterns for the screen design are available. Standard flagstones under a cover provide sufficient weight to ensure secure and stable support.
